

## CeBIT 2005: Award for Utimaco Technology

- **Utimaco Safeware AG was awarded the "Best of CeBIT Award 2005" at CeBIT on the 14th March by the magazine TeleTalk.**

**Oberursel, March 16th, 2005 - The award presented in Hanover, Germany, by Chief Editor Arne Gräve-meyer was given to the Transaction Security division of Utimaco for its SignatureServer SmartCard for SAP which was presented for the first time at CeBIT. Using this innovative solution companies can automatically add digital signatures to electronic invoices that have been created directly in SAP systems and then encrypt them. In this way, for the first time, legally-compliant electronic invoices can be created and processed efficiently within a legally-compliant, structured digital workflow. The deciding factor in giving the award in the category Call center and CRM solutions was that companies were not only able to reduce costs considerably through this process optimization, but also to improve the service quality for their business partners, and so increase customer loyalty.**

"We are very pleased about this award for our signature solution which we have already installed successfully for customers, working together with our partners T-Systems and Seeburger," said Andreas Philipp, Deputy Vice President of Utimaco's Transaction Security division.

TeleTalk is the German top medium for exchanging information in the areas of call center management, customer management and professional telecommunications solutions. The magazine is published by telepublic Verlag (Hanover, Germany) which specializes in the markets of the future: telecommunications, the Internet and customer care. The publishing house also publishes the Business Guides produced by the Computer Telephony editorial team, and the Call Center & CRM Market Guide.

Utimaco Safeware AG is one of the leading technology manufacturers of professional solutions for IT security. The security technologies and solutions developed by Utimaco Safeware protect electronic values of companies and authorities from unauthorized access and guarantee that business processes and administration procedures are binding and confidential.

The business unit Personal Device Security provides technologies and solutions to guarantee mobile security in the fields of strong authentication, including biometric procedures, encryption and integrity control. The products and solutions secure data in Terminal Server and Citrix environments, on PCs, Laptops and PDAs.
