

Utimaco integrates SafeGuard Solutions in Aladdin's Token Management System

- **Utimaco is the first manufacturer of client security solutions to offer a connector to the Aladdin Token Management System (TMS).**
- **SafeGuard solutions for encrypting hard disks and managing devices can now be administered jointly with Aladdin's two-factor authentication.**

Oberursel, April 19th, 2005 – Utimaco has now become the first manufacturer of client security solutions to develop a connector to the Aladdin Token Management System (TMS). For the first time, it provides companies with an easy way to roll out and administer security solutions for hard disk encryption and device management, while also using two-factor authentication. Aladdin's eToken is a USB smartcard that adds very secure two-factor authentication (via knowledge and ownership) to Utimaco's SafeGuard solutions. Utimaco's new TMS Connector can be used to automatically personalize and administer the Aladdin eToken for logon to SafeGuard security solutions. This means it is now also easy to implement both a security software system, for protecting against data theft, with a hardware-based logon system, on big installations.

When Aladdin two-factor authentication is in use, it is not only the knowledge of a password that is needed to authenticate users and assign user profiles: instead, the highly secure combination of knowledge and ownership is used. To logon the user needs both to be in possession of the eToken and to know the password that is used to block the eToken. The eToken USB smartcard stores the user's logon information for different applications and can also perform Single Sign On (SSO) operations. Utimaco's SafeGuard security solutions protect the data saved on the hard disk and on mobile data media information against theft and manipulation. When they are combined with Aladdin's eToken, this produces an exceptionally high security level for data on client systems and on mobile data media.

Utimaco's TMS Connector is now available from Utimaco's and Aladdin's sales partners. For more information, go to: www.utimaco.de.

Utimaco Safeware AG is one of the leading technology manufacturers of professional solutions for IT security. The security technologies and solutions developed by Utimaco Safeware protect electronic values of companies and authorities from unauthorized access and guarantee that business processes and administration procedures are binding and confidential.

The business unit Personal Device Security provides technologies and solutions to guarantee mobile security in the fields of strong authentication, including biometric procedures, encryption and integrity control. The products and solutions secure data in Terminal Server and Citrix environments, on PCs, Laptops and PDAs.
