

## Utimaco Enters Strategic Partnership with Mobile Device Management Solutions Supplier

- **Technological cooperation with iPass to extend Utimaco's position as leader in the mobile security market**

**Oberursel, May 24th 2005 - Utimaco, Europe's leading supplier of IT security solutions will be working closely with iPass, one of America's leading supplier of solutions for Mobile Device Management. Both companies see this cooperation as providing excellent opportunities for sharing resources and expertise to enable companies to deploy mobile infrastructures in a secure and controlled way, and so optimize their business processes. In addition to protecting the data saved on mobile personal devices, managing these devices will also play a key role. The cooperation between the two companies will increase the integration of security and administration functions at the product development stage.**

The growing integration of mobile devices – such as notebooks, PDAs and smartphones - in corporate networks makes meeting the challenges arising from securing and administering these devices, in terms of Security Management, an increasingly important task. Securing the mobile infrastructure is therefore not simply a matter of protecting data on mobile personal devices. It must also be ensured that only authorized and protected devices can access the corporate network, and that the installed software and the security settings complies with the company's security policy. In addition, it must also be possible to centrally update software components on all devices, including all different types of mobile devices.

"We regard our cooperation with iPass as an important step in our ability to use innovative solutions to further extend our leading position in the market for mobile security." said Martin Wülfert, CEO of Utimaco Safeware AG.

"Having Utimaco, a 'best-of-breed' leader in the European IT security space, choose iPass for enhancing their products is a strong endorsement of our endpoint policy management capabilities. iPass has long believed that the best security solutions are those that offer a deep and multi-layered defense. iPass' secure connectivity technology naturally complements tools that protect data at-rest. The combination of Utimaco's and iPass' technologies is expected to provide a comprehensive system for mobile security management", said Joel Wachtler, vice president of strategy and product management of iPass.

Utimaco Safeware AG is one of the leading technology manufacturers of professional solutions for IT security. The security technologies and solutions developed by Utimaco Safeware protect electronic values of companies and authorities from unauthorized access and guarantee that business processes and administration procedures are binding and confidential.

The business unit Personal Device Security provides technologies and solutions to guarantee mobile security in the fields of strong authentication, including biometric procedures, encryption and integrity control. The products and solutions secure data in Terminal Server and Citrix environments, on PCs, Laptops and PDAs.
