

SafeGuard WebMail offers Secure Email Communication without Certificate Infrastructure

- **Utimaco adopts and integrates the Web mailer HiMessenger from HiSolutions AG**
- **SafeGuard WebMail perfectly compliments the central security solution SecurE-Mail Gateway from Utimaco**
- **The extension to SecurE-Mail Gateway Version 5.1 offers improved log analysis, reporting and role-based administration**

Oberursel, October 4, 2006 / Utimaco has adopted the HiMessenger solution from HiSolutions AG. The Data Security Company now offers its customers the established webmailer solution under the name SafeGuard WebMail as an extension to its proven central SecurE-Mail Gateway product.

When it comes to secure communication via email with customers or partners, many organisations find themselves faced with a challenge, since the people they are communicating with have not implemented their own email security system. In order to offer confidential communication via encrypted emails, Utimaco is supplementing its SecurE-Mail Gateway with the SafeGuard WebMail solution. This Web mailer allows external communication partners who do not have their own email security system to access confidential emails securely via SSL through a website. When a message is delivered, the recipient receives an email stating that a new message is waiting in his protected Web inbox. The external communication partner can also send messages and attachments securely via email using SafeGuard WebMail. Internal users notice nothing, as SafeGuard WebMail, in conjunction with SecurE-Mail Gateway, automatically handles the secure e-mail communication in the background.

SafeGuard WebMail from Utimaco extends the functionality of SecurE-Mail Gateway, the proven platform for central e-mail security. Along with S/MIME and OpenPGP, the SecurE-Mail Gateway thus now offers two further certificate less processes allowing email to be exchanged securely in important business processes and where this is required to meet legal regulations. Another useful extension besides SafeGuard WebMail is SafeGuard PrivateCrypto. The module offers e-mail encryption on the central SecurE-Mail Gateway. Recipients can easily decrypt the secure email by entering a password.

"For several years now, our customers, such as the HSH Nordbank as well as other federal banks and financial institutions, have placed their trust in the capabilities of the WebMailer technology for comfortable and secure communication with their business partners", states Timo Kob, Chairman of HiSolutions AG. "In Utimaco, we are pleased to have found a suitable, professional partner that will guarantee the targeted further development of the solution, therefore ensuring the complete satisfaction of our existing customers."

"SafeGuard WebMail is now available in connection with SecurE-Mail Gateway Version 5.1", says Jörg Horn, responsible for gateway solutions at Utimaco. "We are pleased that with HiSolutions AG we have gained a prestigious and innovative security partner, and look forward to realizing complex solutions together".

More information about Utimaco and SecurE-Mail Gateway is available at www.utimaco.com/smgw.

HiSolutions AG

HiSolutions, a consulting firm specializing in information security, risk and IT service management, is one of the largest independent consultancy specialists in the German-speaking countries not associated with any product or manufacturer.
