CeBIT 2007: Utimaco To Launch a New World of Data Security

SafeGuard Enterprise 5.0: Multi-platform Data Security with Central Management

- **SafeGuard Enterprise 5.0 helps companies to implement data security policies across platforms**
- **Flexible, modular architecture enables scalable security**
- **Beta test phase successfully completed – SafeGuard Enterprise 5.0 to be launched at CeBIT 2007**

Oberursel, February 8, 2007. Utimaco will be launching its SafeGuard Enterprise security suite at CeBIT 2007 (March 15th – 21st). With this new product generation from the Data Security Company organisations and companies can, for the first time, benefit from a fully integrated security suite that meets all current and future demands on data security. No matter where information is saved, or who it is being exchanged with, SafeGuard Enterprise secures data on mobile and fixed computing devices, on removable media, servers and in e-mails. The core of the brand new security suite is the central Management Center which for the first time enables companies to simply and effectively implement security guidelines across platforms to meet regulatory compliance requirements.

SafeGuard Enterprise 5.0 targets mid-sized to large corporations that need to store and process their data on different devices and platforms and secure their confidential information at all times. SafeGuard Enterprise is based on an open, modular architecture that enables companies to add security functions to their IT infrastructure using a single, auditable administration module. Additionally, SafeGuard Enterprise supports companies and authorities to reduce costs and risks: Different administrations and key management systems will be consolidated under a central management platform.

At CeBIT, Utimaco will be presenting SafeGuard Enterprise 5.0 to the public for the first time. Version 5.0 comprises the SafeGuard Management Center and the SafeGuard Device Encryption security module.

With the SafeGuard Management Center module companies can implement security guidelines centrally and administer them across the company, and across all platforms. The SafeGuard Device Encryption module transparently encrypts data on notebooks, PCs and removable media. In addition to supporting authentication hardware such as tokens its modern algorithms ensure maximum security. The SafeGuard Management Center module enables companies to protect all data in the network against misuse and unauthorized access.

Selected international test customers have evaluated the beta version of SafeGuard Enterprise 5.0 thoroughly over the last few months. "The users have confirmed their approval of the solution. We were given the best feedback for the ActiveDirectory integration and installation, and also for the Policy Management", said Olaf Siemens, Head of Software Development at Utimaco.

SafeGuard Enterprise 5.0 is available from Utimaco and certified partners after CeBIT. During CeBIT, interested trade fair visitors can get detailed information about the Security Suite from Utimaco in Hall 7 / Stand A 28.

08/02/2007

Further modules rounding off Utimaco's new data security suite are to be added in later product versions:

SafeGuard File & Folder Encryption secures user data that is exchanged between working groups. In addition, it can be used to encrypt both local disk drives and network servers at file and directory level, and assign them individual access rights.

SafeGuard Configuration Protection offers central control over all fixed and mobile computing devices and protects against malware, inappropriate software use, and unauthorized configuration changes.

SafeGuard Data Exchange guarantees the secure exchange of confidential data with business partners and customers.

Utimaco solution portfolio

Product lines:

SafeGuard Shield Solutions protect data on end devices or in networks (data at rest)

SafeGuard Transit Solutions protect data during transmission (data in motion)

SafeGuard Process Solutions protect data during processing (data in use)

SafeGuard Enterprise provides central security policy management with secure authentication and strong encryption across all platforms

Utimaco Safeware AG – The Data Security Company.

Utimaco is the leading provider for data security solutions. The Data Security Company enables mid-sized to large organizations to safeguard their data assets against attacks and to comply with privacy laws by protecting their confidentiality and integrity. In response to twenty-first century threats – the new world of Data Security 2.0 – Utimaco's complete range of solutions provide full 360 degree protection unlike free, end-point or built-in encryption solutions which only cover specific security needs. Only SafeGuard solutions protect and manage data both during storage (data at rest), during transmission (data in motion) and during processing (data in use). Utimaco offers its customers comprehensive on site support via a worldwide network of partners and subsidiaries in Europe, the USA and Asia. Utimaco Safeware AG, with headquarters in Oberursel, near Frankfurt, Germany, is listed on the Frankfurt Stock Exchange (ISIN DE0007572406).
